Embrace human nature with BioMatrix Technology

Patients have unique, individual characteristics. Different physiologies and anatomies – but also the way we interact with them and technology – cause unwanted variability. These unique human characteristics, or biovariabilities, present a challenge and a source of error, rescans, and inefficiency when it comes to MR imaging.

This intrinsic patient variability needs to be addressed in order to truly personalize MRI, and pave the way towards precision medicine. To turn this challenge into an opportunity, we must think differently. Instead of adapting human variability to technology, we adapt technology to humans. We do this by embracing their individual nature – with BioMatrix Technology.

Anticipate challenges before they happen with BioMatrix Sensors.

Adapt to all patients, even critical ones with BioMatrix Tuners.

Accelerate workflows, while increasing quality of care with BioMatrix Interfaces.
